To Whom It May Concern:

This is a statement on my District's experience with Best America/M7 Solutions and the Active Pure products that we procured from them in the fall of 2021 to provide additional protection to our students and staff.

Our desire was to implement a technology that would be effective during the COVID-19 pandemic, also be a useful tool for improving air quality for other airborne viruses, bacteria, and other triggers. We also wanted a solution that not only captured air pollutants, but actively killed virus/bacteria. Long-term maintenance costs of buying and changing filters were also considered during our team's evaluation of the various products and technologies.

After examining the science, Active Pure technology was determined to best meet our criteria. We felt that this air purifier was better for us than HEPA filter only systems and that the Active Pure Technology in the Best America LLC units were able to aggressively combat microbes in the air as well as filtering large amounts of air.

This product has met our expectations. Best America LLC had all units on-site in our district in less than a week. Our staff has performed on-site sampling at several of our campuses to determine if this would make a difference in protecting our staff and students from COVID spread as well as other contagious illnesses. We have been pleased with those results. Our district has a lower positivity rate than our county.

Overall, we have been pleased with our decision to utilize the Active Pure technology as our primary mitigation for air purification. This product has decreased anxieties across the district as it relates to COVID spread concerns. I would recommend the Active Pure solutions to any school district looking for an air & surface cleaning solution.

Thank you,

Chris E. Salley
Sr. Executive Director of Facilities Services
San Antonio Independent School District
